-

High Level Goals:

- Users be able to play a functional Tetris game.
 - Users be able to select difficulties for the Tetris game including easy, normal and hard.
 - Users be able to login in their accounts through the android app.
 - Users be able to view their ranking after the game is over.
 - Users be able to select between playing again or difficulty selection after the game is over.
-

User Stories for Release:

Sprint 1:

- (1) As a user, I want to register a user account via the Android Tetris game so that I can view my highest score.
- (5) As a user, I want to play the Tetris game on my android phone so that I can have some fun.
- (2) As a developer, I want to build a database to store all user information including their user game, password and highest score using the Firebase server.
- (5) As a developer, I want to program a working Tetris game so that it can be played by touching two sides of the phone screen and outputs a final score.

Sprint 2:

- (2) As a user, I want to select difficulties for my Tetris game so that I can challenge myself.
- (4) As a developer, I want to change to speed of falling blocks and make the block generate at random locations to increase the difficulty.

Easy – normal speed, fixed location, gain less score

Normal – faster speed, fixed location, gain normal score

Hard – very fast speed, random location, gain most score

Sprint 3:

- (3) As a developer, I want the firebase server to send data back in order to show the online ranking for the users.
 - (2) As a user, I want to play again after the game is over or be able to select other difficulties.
 - (1) As a user, I want to go back to the login page and be able to login in with other account.
-

Product Backlog:

- Users being able to purchase game items using their game scores.
 - Extra life
 - Slowing the falling block
 - Tools to force remove blocks at the bottom
 - Select the required block for next block
 - Users being able to purchase game scores with bank card.
-

Challenges:

- Request and send information to the Firebase server
 - Merging code
 - Functional Tetris game without bugs
-

Technologies:

- Coding platform: Android Studio
- Server: Firebase
- Hardware: phones running in the Android system
